Band Night – Teacher notes

Second lesson on text, after The Slice Shop. It repeats the four text types in new combinations and adds three things: styling only part of a text (letters, one line), the Pen tool to draw a path for Put on Path, and editing converted text with the Node tool. Every command is in a menu or toolbar.

Minutes	Phase	Watch for
0–2	Open, save with name	Has everyone saved before drawing?
2–5	Background, record	Keep it quick
5–12	Neon title	Text tool, not Selector, to select letters; one text object, not ten
12–18	Sound wave	Pen tool: clicks, double-click to end; stroke colour, not fill; draw left to right
18–24	Line-up	Drag a box; Enter only after each line; select just the first line to resize it
24–29	Speech bubble	Tail overlaps the ellipse before Union; then bubble + text → Flow into Frame
29–33	Spiky ROCK!	Spelling first, Object to Path, Node tool on ONE corner node
33–35	Save, export, upload	SVG + PNG

Common mistakes and the quick fix

- The whole title changes colour: the Selector was active. Text tool, drag over the single letter, then click the swatch.
- Ten separate letter objects: students typed each letter as its own text. It works visually, but the task asks for ONE text – check in the status bar.
- The zigzag line fills with colour: a palette click sets FILL. Click X for fill, set the colour in Stroke paint instead.
- The Pen line goes on forever: they did not double-click. Double-click on the last point.
- Text on the wave starts at the right end: the line was drawn right to left. Edit ▸ Undo and draw it again from the left, or Path ▸ Reverse.
- Union leaves two pieces: the tail did not overlap the ellipse.
- Node tool shows no nodes on ROCK!: still text. Path ▸ Object to Path first.

Assessment (10 points)

Element	Points
Background and record	1
Neon title: one text, a colour per letter	2
Text on a Pen-tool path	2
Line-up text box: centred, heading bigger	1
Speech bubble (Union) with flowed text	2
ROCK! converted and reshaped with the Node tool	1
SVG + PNG handed in with correct names	1

In the SVG the title should be one `text` with several `tspan` elements, the wave text a `textPath` and ROCK! a single `path`. Differentiation: weaker students colour only every second letter and skip the spike; fast students get the bonus table.
